

Softly avoid the wind and not be blown down !

Strong wind arrowboard

Use the prism reflector made by Olafur (NETIS registration KT-160030-VE)
It is a lightweight, high-brightness arrow board with strong wind resistance and high visibility.

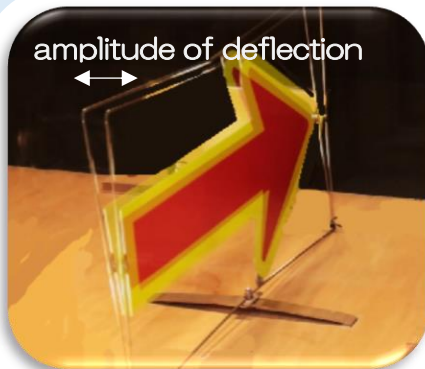

Depending on site conditions and weather, we recommend the use of heavy stones, etc.

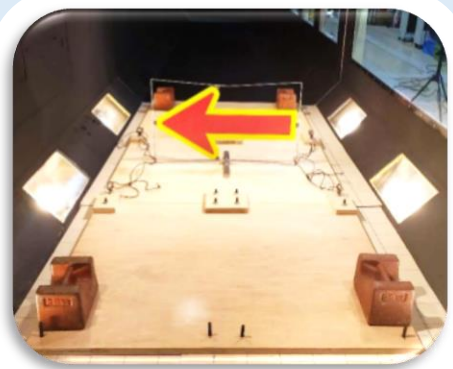

Features

Except for the arrow and the frame, they are all ventilated specifications, and they can be flexibly sheltered from the wind and resist strong winds. (Wind resistance was tested)

Bend to withstand the wind

Wind resistance test

Specification

Arrows can be used on both sides. By rotating the frame, the arrow board can be stored in a very compact space and easy to transport.
